Sage MAS 90 and 200 Extended Enterprise Suite

Product Support Bulletin

Bulletin No:	2009-01	**Date:**	9/11/09
Module:	Installation	**Version:**	1.3
Subject:	Sage MAS 90 and 200 EES version 1.3 update		

After updating an installation to Sage MAS 90 or 200 Extended Enterprise Suite version 1.3, the Sage MAS 90 or 200 ERP system version number is no longer correct. This issue allows older service updates to be installed over the EES 1.3 installation, which removes several of the enhancements installed by EES 1.3. Because the EES 1.3 installation contains Service Update 13, there is no need to install any additional service updates.

New installations correctly reflect the system version number (which should be 4.30.0.15) and will not allow older service updates to be applied.

Resolution:

The EES 1.3 Update Patch is available in the Sage MAS 90 and 200 EES Support area at Sage Online (www.sagesoftwareonline.com). If an earlier service update has been applied after installing EES 1.3, install the program change to reinstall EES 1.3 (which includes Service Update 13). The program change also updates the system version number and prevents older service updates from being installed over EES 1.3.

Service Update 14 is scheduled for September and applies only to EES 1.2 and earlier. Service Update 16, which is scheduled for December, and all future Service Updates will be applicable only to EES 1.3.
